DISCOVER THE POSSIBILITIES
EXPLORE PRIMARY SOURCES THROUGH A NEW LENS
Seth Cayley, Vice President
Primary Sources - Gale

Gale has been at the forefront of supporting humanities research in the digital space for many years. Over the past decade, we have worked with customers to understand the use of our archives in text and data mining projects, and it quickly became clear that users faced common challenges when attempting to analyse large archive sets. To address these challenges, we recruited global advisors to develop a platform that aligned popular open-source tools with Gale’s leading archive data to create a platform with applications in both research and teaching.

The result is the Gale Digital Scholar Lab. This new platform brings together over 600 years of multidisciplinary primary source material with a tool set that allows students and researchers to ask new questions of the content by learning and using accessible open-source tools.

As new features and functionality are added to the platform, Gale is eager to work with current and new academic partners to better understand the research, teaching, and learning needs on campus. Most importantly, we rely on our library partners to further develop the Lab in ways that shed new light on the value of their roles and the resources that support scholarship across the curriculum.

Chris Houghton, Head of Digital Scholarship, International

The Lab has undergone significant development in its first 18 months, and much of this development has been suggested, guided, and tested by customers—reflecting the realities of the twenty-first-century academic experience.

In addition to continual customer interaction, we have used data derived from use of the Lab to shape the way it evolves. An example is increasing OCR download—at the launch of the Lab, the limit of documents researchers could extract at one time was 1,000 per session but by analysing usage, we identified that, of the content sets created globally in the Lab since launch, only 5.5 percent exceeded 5,000 documents, so this became the new download limit.

We’ve also heard from many customers that uploading their own content to work with in the Lab is of great interest, and this is what we have introduced in the latest development. Our aim is to give everyone, regardless of technical skill, a new set of tools and a new language to study, not only digital humanities but traditionally taught subjects too, by enabling the integration of digital research concepts to provide a new lens for exploration and discovery.
LEARNING IN THE LAB

MOVING TOWARD DIGITAL SCHOLARSHIP FOR ALL

With the development of Gale Digital Scholar Lab, learning takes place within the context of the Lab as it facilitates instruction throughout the research process. The Lab is a platform that empowers librarians, instructors, and students to improve their teaching, learning, and scholarly research with Learning Center materials. The Learning Center gives users the tools and support they need to understand and employ the vast amount of information and skill sets available through the Lab. It includes videos with live walk-throughs conducted by our digital humanities specialists, sample projects, glossaries, FAQs, and much more.

Our Beyond the Lab instructional materials equip users with project-based narratives that model the core critical-thinking skills necessary for ideating around research questions and phenomena and interpreting data and findings. By supporting users “beyond the lab,” we’re joining institutions as they work toward developing growth of inquiry within the digital humanities and beyond.

CHALLENGES PRESENT OPPORTUNITIES

1. Difficulties accessing and bringing together authoritative content can lead some scholars to spend years collecting, and months preparing, content sets.
2. Libraries encounter challenges in hosting content and making it available to researchers.
3. Exhaustive possibilities and the volume of tools can make it hard for novice researchers to engage with digital humanities data.

CREATING A SIMPLIFIED EXPERIENCE

The Gale Digital Scholar Lab guides users through three intuitive steps that simplify complex workflows and improve outcomes.

STEP 1 BUILD

- To begin, users build a corpus of documents that will provide the raw text data used to generate visualizations.
- Users can search across their library’s Gale Primary Sources holdings and select documents to add to their custom content set.
- A side-by-side view of OCR text (raw text data) and the original scanned document image helps users quickly determine the accuracy of the OCR text.
- Users upload locally held text files, add metadata in the Lab, and create mixed content sets with Gale Primary Sources material.

STEP 2 CLEAN

- As a part of Gale Digital Scholar Lab, users can create multiple cleaning configurations to tailor how a content set is cleaned, depending on the analysis.
- Testing a user’s cleaning configurations is an important step in determining if they’re ready to start analysis. In the Gale Digital Scholar Lab, users can test their configurations by selecting a content set, and then the first 10 documents will be cleaned with their settings. Next, users will be able to download the original and clean version of those documents to determine if they’ve been cleaned to the degree needed.
- Once users are happy with their cleaning configuration, they can apply it to their analysis. Users will do this by selecting the clean configuration they want to use in Tool Setup.

STEP 3 ANALYZE

- After selecting documents and creating a custom content set, users can analyze and interrogate the data with the text mining and visualization tools.
- Six commonly used text mining methodologies are included: ngrams, named entity recognition, topic modeling, parts of speech, sentiment analysis, and clustering.
- Clear descriptions and Learning Center documentation support users new to digital humanities. Advanced researchers can customise tool configurations to generate new outputs.

When we began considering the acquisition of Gale Digital Scholar Lab, our university was in the middle of forming a minor in digital studies. To support it, we had to give students access to online collections that could serve as a digital sandbox: something they could experiment with, research in, and manipulate digitally. The Lab gave us that, in addition to a suite of tools that are readily accessible in an environment with fewer barriers.”

— Hillary Richardson, Coordinator of Undergraduate Research & Information Literacy Librarian, Mississippi University for Women
Gale has a reputation for empowering learning with high-quality depth and breadth of content and tools that enhance literacy opportunities for librarians, instructors, and students. This pairing, between content and effective learning tools, inspires my work in digital pedagogy, providing users with the instructional tools they need to create positive outcomes within their institutions. With the best practices in teaching and learning instilled within the Gale Digital Scholar Lab’s workflow and Learning Center, we equip users with the tools and scaffolds they need to understand and make use of the knowledge and skills sets required. The skill sets cultivated from the Lab are not only essential for success as a scholar, but as digital citizens in our evolving and innovating world.

Throughout the development of Gale Digital Scholar Lab, we actively partnered with librarians and practitioners in the field of digital humanities to guide our journey. These partnerships informed our alpha, beta, and production versions of the Lab and continue to drive the long-term strategy of the platform. We collaborated with Gale’s user-experience team to test design and functional concepts with over 80 users. These steps helped us make key decisions around all elements of the Lab. The conversations led to more than 100 features and enhancements, which can be directly linked to user feedback we have gathered over the past 18 months. As we continue to enhance the overall experience of the Gale Digital Scholar Lab, we plan to strengthen our partnerships with current and new users to ensure we are helping them accomplish their core research goals.
FROM YOUR PEERS

HEAR

HOW THE UNIVERSITY OF ADELAIDE IS DRIVING DEPARTMENTAL CHANGE AND TEACHING DIGITAL HUMANITIES COURSES

Whether on campus or in their online presence, a clear desire to grow, evolve, and improve shines through from the University of Adelaide. This ambition is reflected in results, with Adelaide seeing consistently impressive growth in their global university ranking over the past six years. For Professor Jennifer Clark, head of the department results, with Adelaide seeing consistently impressive growth in their global university ranking over the past six years. For Professor Jennifer Clark, head of the department, “this means a number of new programs, it means different approaches to things, different styles of teaching . . . different ways of exploring the humanities.”

As Helen Attar, liaison librarian for the faculty of arts, explains, “Gale Digital Scholar Lab will have a significant place in that future.”

Dr. Aaron Humphrey, lecturer in media and digital humanities, explains, “Adelaide is one of the few places in Australia where you can pursue a major or a minor in digital humanities. We are looking to increase that in addition to introducing students to the tools and techniques used in the digital humanities.” For Dr. Humphrey, the benefit of digital humanities is that it “makes it very easy for students to do research that’s never been done before.” Professor Clark sees this benefit as crucial to the aims of the department and the university: “The most interesting history is that which asks questions which haven’t been asked before or explores new material that hasn’t been looked at.”

The Gale Digital Scholar Lab is central to the university’s goal of providing new avenues for discovery. As a teacher of digital humanities, Dr. Humphrey is enthusiastic about the Lab. “The tools we use to explore are immense. In the classroom, that’s the benefit of the Gale Digital Scholar Lab platform—to get students in there and quickly build a dataset, talk about it, look at the results, and then refine that.”

“The most interesting history is that which asks questions which haven’t been asked before or explores new material that hasn’t been looked at.”

— Jennifer Clark, Professor, University of Adelaide

Ready incorporation into his workflow is key. Dr. Humphrey adds, “We have 10 weeks of teaching time. I do not have time to teach students command line coding. To get them to do topic modeling in Python, that’s going to take more time than I have in a class. I like how the Gale Digital Scholar Lab makes this kind of analysis very easy to do, allowing us to get robust and compelling results quickly enough to be able to dissect them in a tutorial session.”

Professor Clark sees strategic benefits. “We want to provide, through digital humanities, opportunities to bridge those two worlds of the sciences and the arts and humanities,” she explains. There is also an advantage for the department to attract students. “We can say to them, ‘You can still do the arts and humanities, but you can also get these [technical] skills.’” Attar concurs. “The biggest growth in jobs is in data science. Anybody who has skills in data management, data manipulation, data visualization, or data wrangling is going to be well sought after,” she says. Dr. Humphrey agrees with the benefits to students. “Some of the most vital work in digital technologies is figuring out where disciplines cross over and how we can create students who are technically literate and who have an understanding of the human heart . . . The possibilities are almost unimaginably full of potential.”

“Gale Digital Scholar Lab provides our community with the unique opportunity to engage with primary sources in ways they may never have considered before, without needing prior knowledge in coding or having to clean data beforehand. While the Lab has great potential for research, we also see it as a great investment for education, as the Lab enables us to provide hands-on experience with text-mining models that students can use for their studies and in their life after university.”

— Katrina McAlpine, Associate Director, Publishing and Data Services, University of Sydney, Australia
