Offering a robust, diverse, archival collection, Gale’s primary source collections make it easier to review multiple documents, break down daunting tasks, and navigate handwritten content. Gale’s HTR technology automatically transcribes a large corpus of handwritten documents, turning handwritten text into readable transcripts useful as a means of quickly scanning the content of a source, thus enabling researchers to view a large number of documents in a shorter amount of time. This time-consuming task has long proven to be a major barrier to the use of manuscript collections in digital humanities projects.
